

CO₂e Emission Rate

Global Performance

Pounds per 100 lbs of Production

Across all global locations in 2019, including global supply chain, sales and administrative, we emitted 17.9 pounds of CO₂e per 100 pounds of total production.

An error was discovered with the Scope 1 emissions for the 2017 and 2018 reporting year that overstated carbon emissions. The past data have been corrected and incorporated into this graph including the corresponding goal from 2017 base-line year.

In 2019, we exceeded the 2020 goal that was set in 2017.
